

# NANOSTATIONS GO MESH

## LEADING EDGE INDUSTRIAL DESIGN

The original NanoStation set the bar for the world's first low-cost and efficiently designed outdoor broadband CPE. The new NanoStation M takes the same concept to the future with new redesigned sleek and elegant form-factors. The low cost, high-performance, and small form factor of NanoStation M makes them extremely versatile and ideal in different applications. It provides many magnitudes of performance improvements in latency, throughput, & scalability compared to all other outdoor systems in its class, capable of high speed 50km+ links.

NSM2, NSM5

With a secondary Ethernet port, it has software enabled POE output for seamless IP Video integration. The Remote hardware reset circuitry of NanoStation M allows for device to be reset remotely from power supply location.

## POWERFUL MESH FEATURES

Run on OpenWRT, LAviNet mesh software is a highly developed technology. It is very intuitive and easy to operate, which features in:

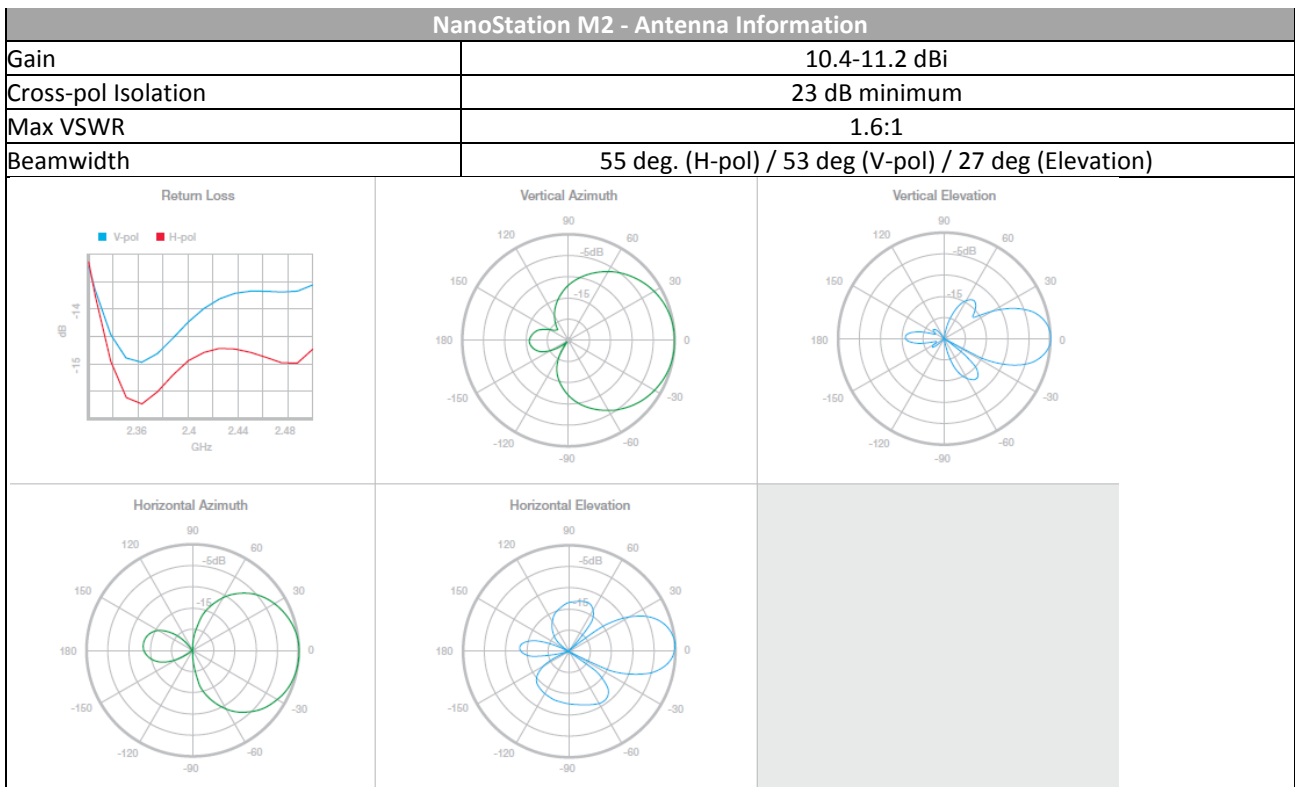

- Self configuration, self adjustment, self healing
- Intelligent routing and channel assignment
- Proactive and dynamic best path selection
- 24 BSSIDs and VLANs
- Distributed or centralized optimization operation modes
- IEEE 802.11i support (AES, WEP, WPA, WPA2, WPA2 enterprise)
- Service protection – a mesh node without uplink will be prevented from client association
- A web-based control panel that support local or remote configuring/control/upgrading its firmware
